

# INSTALLATION GUIDE

## Mount-on stormclip for interlocking tiles

The mount-on stormclip is usually delivered in magazines on plastic strips with 25 clips, allowing for quick removal from the packaging.

These protect against wind suction on a pitched roof, the stormclip is passed under the support batten and hooked into it.

The clip is attached to the grooved section of the side-lock with the hook. The clay roof tile at the bottom left is not shown in the picture (to let the clip seen), but should be covered before installing the clip.

The appropriate size of the clip should be choosed according to the batten dimension.
